</table>
| 1  | Develop the scheduling workflow process and support systems | 1. Develop a scheduling process with steps appropriate to (your) relevant industry publications/maintenance regulations/orders and standards and practices  
2. Scheduling process step requirements for maintenance work are identified and described  
3. Provide necessary scheduling management reports, work control and cost monitoring/control and scheduling performance documents | Maintenance required on operating plant and equipment | a) Identify all the steps in the scheduling process  
b) Develop the details for each of the scheduling steps  
c) Developing documents, forms and management reports and making them available  
d) Producing cost monitoring and cost control reports and documents  
e) Develop and present scheduling process KPIs | a) Business process flow charting  
b) Identify scheduling steps  
c) Range of scheduling steps for maintenance work  
d) Specifying each scheduling step details  
e) Necessary scheduling documents and range of content and the use of management reports  
f) Tracking work schedule progress and costs  
g) Scheduling KPIs to measure and track scheduling process performance | a) Flow charts of complete scheduling process to be used at the site  
b) Responsibilities and accountabilities identified and allocated  
c) Necessary scheduling documents developed in accord with the process flow diagram  
d) Develop all necessary scheduling documents, reports and forms  
e) Provide accurate work schedule tracking charts and all necessary management reports  
f) Present and track KPIs |
| 2  | Determine work order sequence and develop the fixed week schedule | 1. Determine the duration, effort, sequence and dependencies of work as the basis for the schedule using methods, techniques and tools to determine preferred schedule, time management plans, resource allocation and financial commitments  
2. Jobs are identified and prioritised according to the overall production schedule and operational risks  
3. Timelines, personnel and equipment are identified for each job and task | Maintenance required on operating plant and equipment | a) Identifying available work and job priorities  
b) Reviewing each Job Plan content for completeness, complications and cost  
c) Identifying effort and dependencies across workforces  
d) Checking load on external and internal resources and manning levels and levelling the work load to available resources  
e) Confirming availability of internal and external resources needed to do and complete the Job Plan  
f) Confirming availability of all necessary parts and materials at time needed to do work  
g) Reviewing the production schedule for dates to do the intended work | a) Backlog work reporting and other work order management reports  
b) Allocating the work load and negotiating conflicts between jobs  
c) Identify critical path jobs for the week and reviewing jobs to optimise critical path  
d) – f) Levelling the work load for the scheduled week  
e) – b) Contents and scheduling information in a typical production schedule  
f) Show operating risk on a risk matrix  
g) Reviewing new changes to schedule and understanding the schedule | a) Monitor and manage the work backlog according to changing priorities and opportunities  
b) Develop the weekly work schedule  
c) Schedule jobs by priority for completion during the week  
d) Identify operational risks and future production impacts when deciding which work to schedule and which to leave in the backlog  
e) Identify effects of changes on intended schedule, resolve scheduling conflicts that arise, and get approval for changes  
f) Make adjustments to schedule following approval |

| 3  | Coordinate resources and prepare for scheduled work                    | Maintenance required on operating plant and equipment |                                                                                      | b) Analysing the production schedule for access to plant and equipment  
c) Recognising risks to the operation in delaying maintenance work  
3. a) Programming backlog work according to operational priority  
b) Confirming availability of internal and external resources | impact of the changes  
b) Updating the schedule with agreed priority changes  
c) Effectively communicating effects of revised schedule to production and maintenance crews  
d) Effectively advising changed priorities to all other people, internal and contracted services affected by new priorities | c) – d) Inform all parties affected by changes and confirm their understanding of how changes impact them and the work  
1. a) All parts, materials and equipment are confirmed as suitable to do the work  
b) All parts, materials and equipment are reserved for the required job  
c) All external resources and services are confirmed as ready to do the work  
2. The necessary internal and external personnel are assigned to jobs and confirmed as suitable to do the work  
3. Risks to job, equipment, personnel and the schedule are identified and appropriately addressed |
| 4  | Monitor schedule compliance of                                          | Maintenance required on operating                  |                                                                                      | 1. a) Conducting regular checks of work progress against the schedule | 1. a) Using job tracking charts and bar graphs  
2. Monitoring and reporting progress of activities  
3. Monitoring risks on Job Plan  
4. Monitoring adherence to the schedule | 1. a) Establish job tracking charts and bar graphs |
